Backup Application for SharePoint® Online

Exceed One Backup

Exceed1

Simple and low price backup application for SharePoint Online user

Convenient on these case

If you would like to…

1) Back up automatically the Share-Point Online data on a regular.

You can back up a site of data automatically on a regular.(Using the Windows "Task Scheduler")
List data is saved in XML-format.
It will back up automatically all the sites that exist.
You can either reduce the load of backup operation.

2) Back up files other than the document library.

You can save all data on designated site. Also, you can back up attachments in bulk.

3) Back up the OneDrive.

You can back up files that employees were stored in OneDrive.

4) Back up the specified site.

You can back up by selecting the site.

5) Restore only certain files.

It does not back up in a special archive format.
For this reason you is easy to restore the file you want to restore.

6) Organize files in the SharePoint site.

Local path to save is created with the same structure as the site-URL.
Therefore, it is easy to understand the location where the file is stored.

### 7) Using reasonable backup, because using reasonable "Office 365".

Exceed One Backup specialized functionality to the backup.
For this reason it became a simple and low-cost application.
